

Contents

1	Introduction	7
1.1	Zirconium, zircon and zirconia definition	7
1.2	Mineralogy and deposits	8
1.3	Mining and processing	10
1.3.1	Zircon sands mining and concentrate production	10
1.3.2	Zirconia and zirconium metal	14
1.4	World production, reserves and market	16
1.4.1	Current production and reserves by country	16
1.4.2	Market behaviour and dynamic	17
1.5	Industry structure and consumption patterns	17
2	Material Properties	23
2.1	Zirconium	24
2.1.1	Physical and Mechanical	24
2.1.2	Nuclear	27
2.2	Zirconium Compounds	27
2.2.1	Silicates - Zircon Physical Properties	27
2.2.2	Oxides - Zirconia Physical Properties	28

2.2.3	Borides, Carbides, Silicides and Nitrides - Physical Properties	28
2.2.4	Halides - Physical Properties	28
3	State-of-the-art applications	33
3.1	Foundry sands and coatings	33
3.2	Refractories	35
3.3	Ceramics	36
3.3.1	Traditional ceramics	36
3.3.2	Advanced ceramics	37
3.3.3	Electro-ceramics	40
3.4	Glass	41
3.5	Major industrial zirconia and zirconium chemical applications	42
3.5.1	Gemstones	44
3.5.2	Nuclear industry	44
3.5.3	TiO ₂ coatings	45
3.5.4	Cosmetics	45
3.5.5	Paper and printing	46
3.5.6	Paints and inks	46
3.5.7	Catalysis	47
3.6	Minor chemical applications	47
3.6.1	Ammunition and explosives	47
3.6.2	Gas purification	47
4	Emerging R&D	49
4.1	Advanced coatings and functional materials	49
4.1.1	Paper	49
4.1.2	Plastics	50
4.1.3	Wood	50
4.1.4	Fabrics and textiles	50
4.1.5	Glass	50
4.1.6	Concrete	51
4.1.7	Gems	51

4.1.8	Ceramic surfaces	51
4.1.9	Smart coatings with enhanced properties	51
4.1.10	Coating technologies	52
4.2	Advanced ceramics	52
4.2.1	Ceramics with tunable properties	52
4.2.2	Ultra-High temperature and high-wear applications	52
4.2.3	Dental implants	53
4.2.4	Composite and alloy fabrication technologies	53
4.3	Casting and moulding	53
4.3.1	Enhanced modulus refractories	54
4.3.2	Injection moulding ceramics	54
4.3.3	3D printing consumables and photo-polymerisable ceramics	54
4.4	Grinding media and grinding technologies	54
4.5	Biomedical applications	55
4.5.1	Implants	55
4.5.2	Dental parts	55
4.5.3	Biocompatibility	56
4.5.4	Bioconjugation	57
4.5.5	Drug delivery and pharmaceutical formulations	57
4.5.6	Bioimaging	58
4.6	Catalysis	58
4.6.1	Inorganic catalysis	59
4.6.2	Gas catalysis	59
4.6.3	Organic catalysis	60
4.7	Fuel cells	62
4.7.1	Proton Exchange Membranes	62
4.7.2	Ion transport and conductivity in zirconia	62
4.7.3	Solid Oxide Fuel Cells	62
4.8	Adsorption and immobilisation	63
4.8.1	Water, food and biological applications	63
4.8.2	Remediation applications	63
4.8.3	Radioactive applications	64

4.8.4	Gas storage and adsorption	64
4.8.5	Sorption for catalysis	64
4.8.6	Sorption of zirconium	65
4.9	Sensing	65
4.9.1	High temperature and pressure	65
4.9.2	Gas sensing	65
4.9.3	Biosensing	65
4.10	Nanomaterials, nanorods, nanostructures and nanofabrication	66
4.10.1	Nanotubes and ordered arrays	66
4.10.2	Foils and thin films	67
4.10.3	Surface modification	67
4.10.4	Nanofibres	67
4.10.5	Self assemblies, organic templates, and hybrid materials	67
4.10.6	Nanofluids	68
4.10.7	Nanoparticles, nanopowders, nanocrystals and composites	68
4.11	Optical materials	69
4.11.1	Waveguides, fibres and optical substrates	69
4.11.2	Nanostructured colour and dyeing	69
4.11.3	Luminescence and emission	69
4.12	Electronics and solid state devices	70
4.12.1	Memory devices	70
4.12.2	Electrical gates and transistors	70
4.12.3	Superionic conductivity	70
4.13	Research trends	70
4.13.1	Number of citations per research topic	71
4.13.2	Relation to high-level research trends	76
4.13.3	Classification according to applications maturity level	78
